Rockgate Airborne survey at Bathurst Inlet Uranium project, Nunavut

Vancouver, British Columbia, June 26, 2007 – Rockgate Capital Corp. (TSX Venture: RGT) is pleased to announce that Aeroquest International Ltd. of Mississauga, Ontario has been contracted to complete a 7,300 kilometre, Aero TEMII/Radiometric airborne geophysical survey at Rockgate's 100% owned Bathurst Inlet uranium exploration project in Nunavut, northern Canada. The survey is expected to commence in mid August.

The Bathurst uranium project covers an area of over 1,000 square kilometres, located along the west side of Bathurst Inlet, over a large Proterozoic, sedimentary basin with historical uranium occurrences. The uranium mineralization is reported to be fine grained and disseminated in a matrix of quartz grains, clay minerals with minor pyrite and chalcopyrite, and situated near the basal angular unconformity, in close proximity to a large regional fault structure known as the Bathurst Inlet Fault.

Rockgate plans to have field crews at the project in July, conducting detailed mapping and sampling programs on the known uranium occurrences and immediately surrounding areas. Upon completion of sampling at these areas, crews will undertake regional mapping and prospecting and follow up analysis of geophysical anomalies discovered by the airborne survey. The program is anticipated to extend into mid-September.

Mr. Lorne Warner, P. Geo, Director and VP Exploration is the Qualified Person for this release under NI 43-101.

For further information contact Karl Kottmeier, President of Rockgate Capital Corp., at (604) 961 9212.

ON BEHALF OF THE BOARD OF DIRECTORS OF ROCKGATE CAPITAL CORP.

Karl Kottmeier
President
